## Sprint 2 Review: JobTrends

11/9/18

### **Actions to stop doing:**

- Coming up with too many features that are not feasible with the given time frame.

### **Actions to start doing:**

- Meeting together in person more often to increase productivity. Even if we are working on separate tasks.

### **Actions to keep doing:**

- Teammate support: we should continue providing technical help when requested by other team members, even when it isn't explicitly a shared task.

### **Work Completed:**

- Connect scraping script to the database
- Create daily scraper to collect data regularly
- Populate the database with the data from Indeed
- Come up with keywords
- Filter data through elasticsearch to establish relationships
- Learn how to use Plotly and display a graphic
- Connect graph to django project landing page
- Connect database to graph

### **Work Not Completed:**

- Make HTML buttons

### **Work Completion Rate:**

For this sprint, we planned to complete two user stories, and estimated that this would take 50 work hours. This sprint lasted 14 days, during which we were able to fully complete two user stories, for a total number of 50 hours worked. This brings the daily rate of user story completion to 0.14, and the daily rate of hours worked to 3.6.
