    - Change security protocols in settings: 2
    - Use nginx to run website: 5

Sprint 1:
- As a user I want a personalized experience on a job site that is not offered elsewhere.
- As a user I want a dashboard that is easy to view and customize.
- As a user I want a website that displays data consistently and accurately.

Sprint 2:
- As a user I want to use a website that works on across all my devices.
- As a user I want a website that gives me access to all of its features and is customizable.
- As a user I want to know what this website is about, and where the data comes from.

Sprint 3:
- As a user I want to have an account feature that lets me save all my information and preferences.
- As a user I want to be able to customize the website features so that I can create an individualized graph that will help me analyze cs job stats.
- As a user I want to be able to save my graphs so that I can check back on them regularly.
- As a user I want these graphs to be presentable and meaningful.

Sprint 4:
- As a user I want the website to have a recognizable logo.
- As a user I want a secure connection to the website.
- As a user I want a secure payment method.
