Sprint 1 Review: JobTrends

10/29/2018

Actions to stop doing:

- The team should stop moving around scrum meeting times and stick to a regular schedule and location. This will lead to regular progress updates and overall consistency when working together, ensuring everyone is on the same page.

Actions to start doing:

- Collaborating on user stories: increasing cooperation between team members (i.e. pair programming) not only enhances productivity and communication, but also keeps team members in sync on what needs to be done/where progress stands. Even when working on individual tasks, synergy is maintained by working in the same area.

Actions to keep doing:

- Teammate support: we should continue providing technical help when requested by other team members, even when it isn't explicitly a shared task.

Work Completed:

- Explore bootstrap themes and pitch to team
- Landing page(bootstrap html css)
- Research LinkedIn api
- Scrape one job listing
- Scrape many job listings
- Follow blog post on django and elasticsearch
- Setup elasticsearch table
- Display test data from database on website

Work Not Completed:

- Parse scraped job listing into meaningful data (Identify tags)

Work Completion Rate:

For this sprint, we planned to complete three user stories, and estimated that this would take 60 work hours. This sprint lasted 14 days, during which we were able to fully complete two user

stories, for a total number of 50 hours worked. This brings the daily rate of user story completion to 0.14, and the daily rate of hours worked to 3.6.
